The labour-saving Kopex professional **Pipe Tools** require just a few twists of the wrist and their encased design means that sharp edges are kept away from fingers. Their clever, compact design makes **Pipeslice®**, **Pipe-prep™** and **Pipesight™** suitable for use in the tightest spaces and all models take little room in the toolbox.

Both **Pipeslice®** and **Pipe-prep™** are delivered in blister packs and new combination packs are available with a 15mm Pipeslice® and 15mm Pipe-prep™. A 22mm version is also available. For the professional installer there is a triple pack which includes the popular sizes of 15mm, 22mm and 28mm Pipeslice. Genuine replacement blades for Pipeslice™ models are sold separately.

Ask for the genuine Kopex **Pipeslice®**, the brand new **Pipe-prep™** and new **Pipesight™** products available from all good plumbing merchants.

# KOPEX Professional Pipe Tools

## THE GENUINE Pipeslice<sup>®</sup> TOOL

Saves time and effort - cuts pipe with a few twists of the wrist

Automatic locking cutting blade makes cutting easy

Long lasting steel blade with a hardened cutting edge

Makes a clean and precise cut on copper pipe

Compact design, easily used in tight spaces, single hand operation

**Pipeslice<sup>®</sup>** is the genuine pipe cutting tool. It is a single handed plumbing tool that makes copper pipe cutting easy, with just a few simple twists of the wrist. A Corgi award winner for technical innovation, the practical design allows single handed operation with automatic adjusting and locking-on for ease of use.

Available in a comprehensive range of sizes, Pipeslice<sup>®</sup> provides a clean cut through copper piping and is ideal for use in confined spaces – especially where there is minimal pipe to wall clearance. Pipeslice<sup>®</sup> avoids pipe damage and external deburring, making finished pipe work cleaner and with increased integrity for a professional finish.

## THE BRAND NEW Pipe-prep<sup>™</sup> TOOL

A quicker, cleaner and safer way to prepare copper pipe

Ideal for confined spaces - compact design

Quick to use - can be rotated in either direction

Patented deburring mechanism means contaminant free pipes

Deoxidisation brush removes oxidised layer from pipe for soldering

**Pipe-Prep<sup>™</sup>** is a brand new combination tool that cleans and deburrs copper pipe ends. Flattening and smoothing, rather than grinding and cutting off burrs, the tool maintains the integrity of the material and produces the right shape for subsequent joining. Pipe-Prep<sup>™</sup> removes oxidation, a common cause of pipe joint failures, making it easier and quicker to achieve sound and reliable pipe connections.

With no swarf, Pipe-prep<sup>™</sup> helps produce contaminant-free pipe work in refrigerant and potable applications with no internal flow restrictions and greater contact area for solder and other joining methods.

## NEW Pipesight<sup>™</sup>

A quicker and easier way to prepare drilling holes

Compact design, easily used in tight spaces, single hand operation

Laser plumb line - for correct pipe alignment in radiator installations

**Pipesight<sup>™</sup>** is a brand new laser tool for correct pipe alignment in radiator installations. The laser plumb line easily screws on to a fitting and allows for correct alignment. The small and compact design allows it to be easily used in tight spaces, with single hand operation. It also comes with an adaptor for 22mm pipe fittings. A quicker and easier way to prepare drilling holes for copper piping.
